

Alfonica IoT

**The Future is Smart
and It's Here**

Leaders in business communications

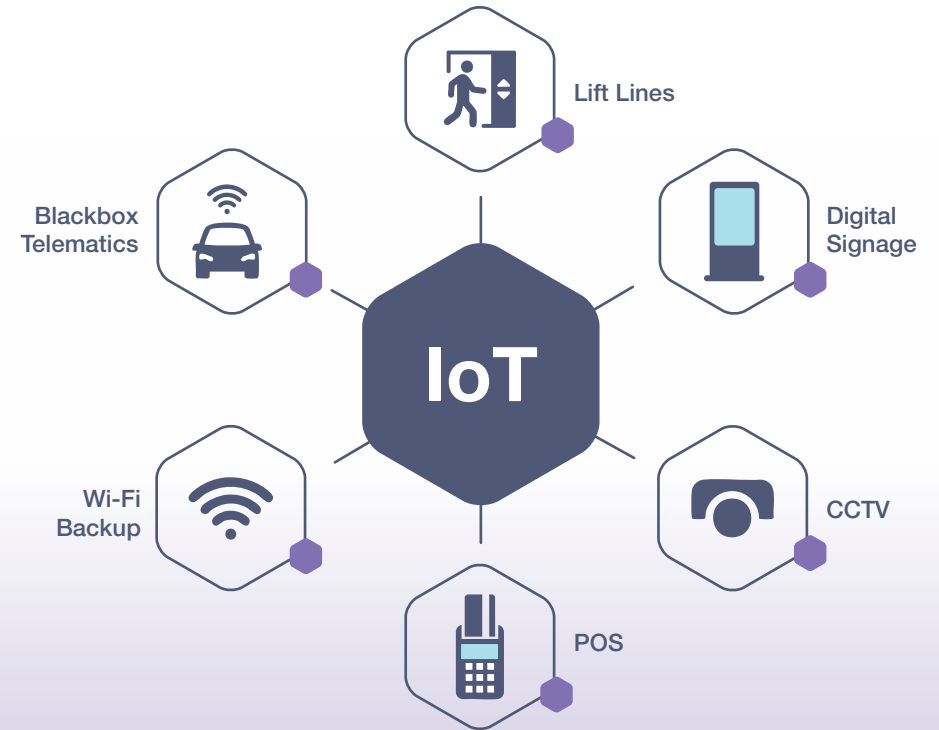

What is IoT?

The Internet of Things, or IoT, is about giving everyday devices a voice. From machines and sensors to vehicles and smart meters, these connected tools can talk to each other, share data, and make smart decisions on their own.

Where is IoT used?

Your smart device is closer than you think.

CCTV - IoT CCTV cameras stream live video to the cloud, with motion detection, facial recognition and smart alerts for proactive security and asset tracking from anywhere.

Lift Lines - Lifts can send real-time data on usage and performance, helping detect faults early, schedule maintenance automatically and reduce downtime for safer, more reliable operations.

EPOS - Smart cash registers take payments, update inventory, track customer habits, support loyalty program and deliver real-time sales data to help manage your business.

IoT is Everywhere, Growing Fast

Connectivity must be global, flexible and resilient.

IoT connections to grow by 60% between 2025-2030

Cellular networks cover 98% of populated areas

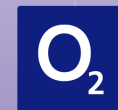

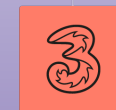

Global IoT market value in 2025 estimated at \$1.52 trillion

How Reliable is Your Current Connection?

For your business to stay connected without any disruptions, you need a solution that isn't tied to a single network or location. Instead, an IoT SIM card automatically connects to the most reliable one available.

If a network goes down, your device will seamlessly switch to the next best option, ensuring you always have a connection. IoT SIM cards are the next step in reliable, premium connectivity. Losing a connection can be incredibly costly, and our solution is built to prevent that.

At Alfónica, we make this easy for you. We protect you from this risk, providing the failover capability needed to safeguard your business operations. Alfónica IoT ensures that all your smart devices like sensors, machines, and vehicles stay on, no matter what.

We Offer You Unique Benefits

Network Agnostic

We don't have exclusive agreements with a single network. Our IoT solution automatically connects to the most reliable network available at any given moment. If a network fails, your device will switch to the next one, ensuring a "never drop" connection.

Get Your Bespoke Pricing

Tell us about your business size, which devices you'd like to connect to and our IoT connectivity experts will create a tailored solution that meets your specific needs and budget. No obligation, just expert advice. Our main priority is to always keep you online and we're committed to building a strong partnership to make it happen.

Seamless Setup

It's a similar process like setting up a mobile phone contract. We'd quote once customer wants to proceed, we go through onboarding process like any mobile customer.

Global Coverage with Non-Steered IoT SIMs

Get superior IoT connectivity wherever your devices go. Deploy devices confidently, knowing you won't lose signal. Our global network connects to multiple providers in every country.

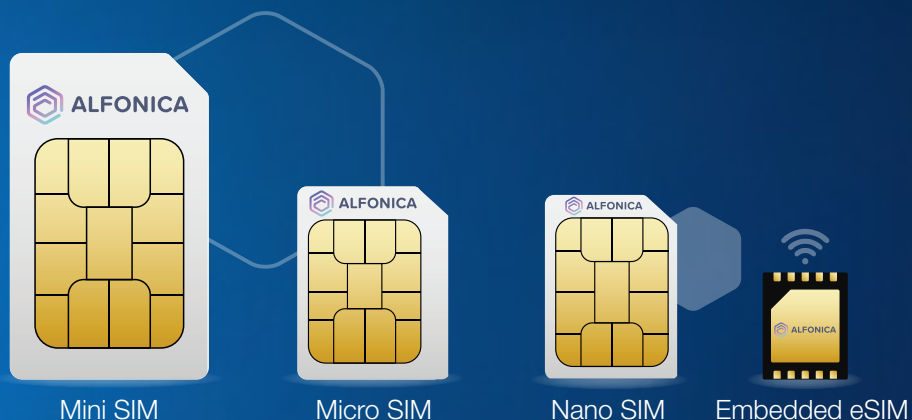

Alfonica's IoT solution gave our Zebra devices the reliable connectivity we needed in the warehouse. With multi-network SIMs, we no longer struggle with signal issues as everything is running smoothly.

S&J Sales Co

One IoT SIM Card. Multiple Sizes.

Solutions for Every Business

We offer flexible packages to fit all business sizes and needs:

Packages from low to high usage

Perfect for devices that require minimal data, ensuring cost-effectiveness.

Connectivity Backup

Use our IoT solution as a reliable backup to your primary connection, guaranteeing business continuity.

IoT connectivity solves real business challenges, making an immediate impact:

Track Assets in Real Time

Never lose sight of your equipment, vehicles, or inventory again. IoT-connected devices let you track, locate, and monitor assets 24/7.

Automate Data Collection

Replace manual processes with real-time data capture. This means fewer errors, faster reporting, and better insights.

Predict Maintenance Needs

Reduce downtime and unexpected failures by detecting issues before they happen. IoT sensors can alert you when your equipment starts to show signs of trouble.

Connected. Customised. In Control

-  Pay only for the **data** you use.
-  Price ranges starting at **as little as** £0.49p/month.
-  **Bulk SIM savings** with customised pricing.
-  **Multiple** network providers per country.
-  Freedom to **switch** operators at any time.
-  Expert **consultation** with our IoT specialists.
-  Flexible contracts with **no long-term commitment**.

Customer Story

NES Security provides a wide range of security solutions for clients in and around London. The company offers CCTV, alarm, and intercom systems, as well as IP and digital phone systems, data networking, and gate automation.

The team of expert installers works quickly and efficiently, and the company is also fully committed to using environmentally friendly methods and products wherever possible to support a sustainable society and economy.

NES Security needed a reliable way to keep connectivity between their routers and CCTV cameras. Any downtime could risk their clients' security systems.

Alfonica enrolled NES Security on Alfonica IoT. This service gives their CCTV systems constant connectivity, with SIMs that can automatically switch across multiple mobile networks.

Constant connectivity as the SIMS can access multiple networks to keep constant connectivity. Reliable connectivity between routers and CCTV cameras. Zero downtime, as the system always finds the strongest available network. Peace of mind for both NES Security and their clients, knowing critical security systems stay online 24/7.

“

Alfonica IoT has transformed the way our CCTV systems stay connected. We no longer worry about outages, as the SIMs automatically switch networks to keep us online. It's reliable, simple, and exactly what we needed

Daniel Lichtenstein, CEO
